Veeam Data Platform offers several options packaged to deliver relentless security, fast, reliable recovery, and complete data portability. Whether you're just getting started or you're managing a large enterprise operation, Veeam has a flexible option for you. The Veeam Universal License (VUL) is a game-changing portable license that allows you the flexibility to protect cloud, virtual and physical workloads interchangeably no matter where you are on your hybrid journey. The extremely capable backup, monitoring and recovery features of Veeam Data Platform are ready to keep your business running.

Licensing Details

The fully featured, portable Veeam Universal License (VUL) is how the Veeam Data Platform is licensed, enabling support across any environment, whether on-premises, hybrid, or multi-cloud, interchangeably. It provides full feature capability across virtual, physical, cloud, enterprise application workloads, and much more. This document outlines the features that are available by the proper Veeam Data Platform edition.

If you need detail for cross-referencing legacy socket-based licensing which ceased sale in 2023, please see [this asset](#).

Workloads Environments	Veeam Universal License On-premises, cloud and hybrid
Expanded Virtual machines: VMware vSphere, Microsoft Hyper-V, Nutanix AHV, Oracle Linux Virtualization Manager, Scale Computing HyperCore, Proxmox VE, HPE Morpheus VM Essentials, Sangfor aSV, XCP-ng, Citrix XenServer, Red Hat OpenShift Virtualization Manager, Platform9, & Verge.IO	Yes
Physical servers, workstations and endpoints: Windows, Linux, macOS, Oracle Solaris and IBM AIX	Yes
Enterprise apps for Microsoft, Oracle, SAP HANA, MongoDB and more	Yes
Cloud-native backup and recovery for AWS, Microsoft Azure and Google Cloud	Yes
Object Storage backup and NAS File Shares	Yes
Microsoft Entra ID, Intune Policies	Yes
Deployment	
New Veeam Software Appliance	Yes

Licenses for Veeam Cloud and Managed Service Providers (VCSP)

VCSP rental licenses function in a similar way to subscription licenses, but uses a point-based system. For more information, please refer to your [VCSP licensing documentation](#). For VCSP partners leveraging Veeam Data Platform, please use this feature comparison guide. For standalone licenses, service providers can access the [VCSP Feature Comparison](#) guide on ProPartner Portal.

VEEAM DATA PLATFORM

Secure Backup & Fast Recovery • Proactive Observability & AI • Clean Orchestration & Compliance

VEEAM DATA CLOUD VAULT

Secure, Immutable Cloud Storage

AI Powered by Veeam Intelligence	Veeam Data Platform Veeam Universal License (VUL)				Description
	Community	Foundation	Advanced	Premium	
AI					
New Malware Deep Analysis Agent			✓	✓	Quickly identify threats and understand their impact with clear visualizations and guided recovery steps. Respond faster to incidents, reduce downtime, and restore data safely without switching between tools.
New Deep Data Analysis Agent			✓	✓	Get to the right answers in moments by querying complex data with natural language. Convert massive reports into clear summaries and prioritized recommendations so you can act faster and with confidence. *Available in Veeam ONE
New Speech to Text		✓	✓	✓	Speak instead of type to get fast, accurate results. Voice input streamlines your workflow, captures technical details, and enables you to work without limits.
New Data Resilience Daily Summary report			✓	✓	Delivers one daily email summarizing policy and job results, correlating issues with Veeam KB articles, and listing recommended actions after analysis completes.
New Intelligent Reporting & Interaction			✓	✓	Turn complex data into clear, actionable insight so you can decide faster and move with confidence. Interactive reporting makes information easy to explore, reduces noise, and keeps your team focused on results. *Available in Veeam ONE
New Experienced Backup Admin Agent			✓	✓	An AI agent within Veeam Intelligence that helps backup administrators work faster across common operational tasks. It parses session logs to turn complex failures into clear summaries, root causes, and recommended next steps. It integrates with support to view, summarize, and update cases directly from Veeam Intelligence. And it provides policy-aware capacity forecasting that highlights top storage growth contributors.
Chat assistance		✓	✓	✓	Resolve issues faster, optimize performance, and make confident decisions with quick answers and actionable insights.

✓ Fully supported ✓ Partially supported

Backup and Recovery <i>Powered by Veeam Backup & Replication</i>	Veeam Data Platform Veeam Universal License (VUL)				Description
	Community	Foundation	Advanced	Premium	
Security					
Enhanced Veeam Updater		✓	✓	✓	Simplify and automate the process of keeping Veeam Data Platform components up to date. On Veeam appliances, the updater maintains both the operating system and the Veeam applications. On Windows-based deployments, it keeps the Veeam applications up to date. The shared Veeam Updater architecture now extends across all Veeam Data Platform components through an intuitive web-based interface or command-line utility. Requires an active subscription.
New SAML support		✓	✓	✓	Support for SAML 2.0 (Security Assertion Markup Language) authentication to enable organizations to integrate with third-party identity providers (IdPs) for secure, federated single sign-on (SSO) and user authentication.
Recon			✓	✓	Protect your backup servers by identifying adversary tactics, techniques, and procedures (TTPs) used during a cyberattack. (Powered by Coveware).
Enhanced Malware detection		✓	✓	✓	Scan and analyze all protected machines during backup with little impact on backup windows. File Index Analysis compares new data against the last successful backup to flag restore points as suspicious, infected, or clean, across structured and unstructured workloads including VMs, file shares, filers, and object storage, using analytics, signatures, and indicators of compromise. Veeam Threat Hunter adds fast signature-based scanning against millions of known threats with real-time database updates, and the IoC Tools Scanner identifies known attacker tools and data exfiltration utilities. The Content Scan option in SureBackup, Secure Restore, and Scan Backup uses the YARA engine to scan entire backups against your chosen detection rules. (*Threat Hunter, IoC Tools Scanner and YARA scan require Advanced or Premium Edition.)
Veeam App for CrowdStrike Falcon LogScale			✓	✓	Veeam Data Platform event data is sent to the CrowdStrike Falcon Logscale engine and automatically analyzed by leveraging pre-built monitoring dashboards and scheduled searches.
Veeam Data Connector for CrowdStrike Next-Gen SIEM			✓	✓	Data parser that can ingest over 300 individual Veeam Data Platform events for custom dashboards or data analytics.
Veeam App for Splunk			✓	✓	Leverage Veeam Event Forwarding capabilities, Veeam App for Splunk includes monitoring and security dashboards, security alerts, and reports. The app integrates seamlessly with Splunk user roles and location management.

Backup and Recovery Powered by Veeam Backup & Replication	Veeam Data Platform Veeam Universal License (VUL)				Description
	Community	Foundation	Advanced	Premium	
Veeam App for Palo Alto Networks XSIAM					Leverage Veeam Event Forwarding capabilities from both Veeam Backup & Replication as well as Veeam ONE, the Veeam App for PaloAlto XSIAM includes monitoring and security dashboards and reports. It also integrates with PaloAlto user management and location awareness.
Veeam App for Palo Alto Networks XSOAR					Offers a bi-directional API-level integration with Veeam Backup & Replication and Veeam ONE for SOC and Automation teams. It provides automatic incident creation, a security dashboard based on Veeam security indicators and allows incident remediation right out of the XSOAR UI.
Veeam App for ServiceNow					Automate Veeam Backup and Recovery in ServiceNow with dashboards, audit-ready logs, and self-service to speed response and strengthen compliance.
Veeam App for Microsoft Sentinel					Integrates Veeam resilience into SOC workflows by streaming backup/security events and adversary TTPs to Microsoft Sentinel, enabling bi-directional incident API actions for faster detection and response.
Syslog Event Forwarding					Veeam events can be streamed to external syslog servers, including third-party syslog-compatible SIEM tools that monitor for known events, extending support to security teams.
Veeam Incident API					Let your cyberthreat tool report infections directly into the Veeam Incident API, marking existing restore points as infected or trigger backup.
Four Eyes Authorization for backup deletion					Four Eyes Authorization will require secondary user to authorize destructive operations related to backup deletion or repository deletion in Veeam Backup & Replication, addition of new admins, removal of existing users, or changes to MFA.
Key Management System (KMS) Integration					Centrally manage cryptographic keys, eliminating the need for app-specific key management. (Requires Advanced or Premium editions for this functionality).
Secure Restore					Increase security and reduce interruptions caused by malware and recover back to a safe, uncompromised restore point through an optional YARA scan performed directly in backup files prior to recovery. (*YARA Scan requires Advanced or Premium Edition).
SureBackup					Automatically detect threats, test, and verify the recoverability of each backup by running the VM directly from a backup file in a fenced-off copy of your production environment, including support for custom application test scripts. Perform manual, ad-hoc backup content scans* for imported backups or whenever threat analysis is required. (*YARA Scan requires Advanced or Premium Edition).

Backup and Recovery Powered by Veeam Backup & Replication	Veeam Data Platform Veeam Universal License (VUL)				Description
	Community	Foundation	Advanced	Premium	
Enhanced Immutability					Immutability is provided by the hardened repository for all editions, with the Veeam Software Appliance built-in repository immutable by default. Veeam Backup for Google Cloud repositories are also protected against deletion and modification with immutable backups, helping defend against ransomware and accidental loss. Object storage immutability requires Foundation or Enterprise license at minimum.
Multi-factor authentication (MFA)					Enhance Veeam Backup & Replication access control by enabling multifactor authentication for backup console users.
Veeam Security & Compliance Analyzer					Perform an automated backup server configuration check against best practice guidelines to understand how backup infrastructure can be improved to address potential security concerns.
FIPS compliance					Veeam backup infrastructure components use FIPS-compliant cryptographic APIs and modules.
Audit capabilities					Track user actions and backup activities with Windows events and gain complete transparency over file level restore operations via specifically designed audit files.
Backup					
Support for VMware vSphere					Protect VMware vSphere VMs with the ability to instantly recover complete VMs as well as perform granular recovery of key application items.
Support for Microsoft Hyper-V					Protect Microsoft Hyper-V VMs with the ability to instantly recover complete VMs as well as perform granular recovery of key application items.
Enhanced Support for Proxmox VE hypervisor					Protect Proxmox VE VMs with the ability to instantly recover complete VMs as well as perform granular recovery of key application items.
Support for Nutanix AHV hypervisor					Protect Prism Central or Prism Element-hosted VMs, data, applications, and more with the ability to instantly recover any image-level backup to AHV as well as perform granular recovery of key application items.
New Support for Scale Computing HyperCore					Provides native, agentless backup and recovery for Scale Computing HyperCore with secure, immutable protection, ransomware resilience, and seamless portability.

Backup and Recovery Powered by Veeam Backup & Replication	Veeam Data Platform Veeam Universal License (VUL)				Description
	Community	Foundation	Advanced	Premium	
New Support for HPE Morpheus VM Essentials					Native, agentless, host-based data protection for HPE Morpheus VM Essentials with application-aware backups, changed block tracking, and cross-platform recovery.
New Support for Sangfor aSV hypervisor					Protect Sangfor aSV virtual machines and data with native, agentless backup, using change block tracking for efficient incremental backups to any Veeam repository. Includes cross-platform restore, Instant Recovery to VMware and Hyper-V, and integrated malware detection.
New Support for XCP-ng hypervisor					Protect XCP-ng virtual machines and data with native, agentless backup, using change block tracking for efficient incremental backups to any Veeam repository. Includes cross-platform restore, Instant Recovery to VMware and Hyper-V, and integrated malware detection.
New Support for Citrix XenServer hypervisor					Protect Citrix XenServer virtual machines and data with native, agentless backup, using change block tracking for efficient incremental backups to any Veeam repository. Includes cross-platform restore, Instant Recovery to VMware and Hyper-V, and integrated malware detection.
New Support for Red Hat OpenShift Virtualization Manager					Protect Red Hat OpenShift virtual machines and data with native, agentless backup, to any Veeam repository. Includes cross-platform restore, Instant Recovery to VMware and Hyper-V, and integrated malware detection.
New Support for Platform9 hypervisor					Protect Platform9 virtual machines and data with native, agentless backup, using change block tracking for efficient incremental backups to any Veeam repository. Includes cross-platform restore, Instant Recovery to VMware and Hyper-V, and integrated malware detection.
New Support for Verge.IO hypervisor					Protect Verge.IO virtual machines and data with native, agentless backup, using change block tracking for efficient incremental backups to any Veeam repository. Includes cross-platform restore, Instant Recovery to VMware and Hyper-V, and integrated malware detection.
Support for Oracle Linux Virtualization Manager					Data protection and granular recovery for Oracle Linux Virtualization Manager and Red Hat Virtualization hypervisor VMs, data, and applications.
Enhanced Veeam Backup for Microsoft Entra ID					Protect Entra ID with backup and restore capabilities covering Intune Device Configuration profiles, Device Compliance Policies, organization contacts, users, groups, applications, and device objects, including their BitLocker keys. Includes role-based access control (RBAC) to delegate backup and restore tasks with least-privilege roles. (Protection of conditional access policies, Intune policies, and log backups require Advanced or Premium Edition).

 Fully supported
  Partially supported

Backup and Recovery Powered by Veeam Backup & Replication	Veeam Data Platform Veeam Universal License (VUL)				Description
	Community	Foundation	Advanced	Premium	
Support for Public Cloud IaaS and PaaS					Native snapshotting, image-based backup and agent-based backup options for cloud-hosted VMs, databases, file shares, and object storage from leading providers like Amazon Web Services (AWS), Microsoft Azure, and Google Cloud.
Application- aware, image-based backups					Create application-consistent backups with advanced, application-aware processing for granular recovery. (Transaction log backup for Oracle, PostgreSQL and SQL Server is not included with Community Edition).
New PostgreSQL Patroni Cluster Support					Protect PostgreSQL clusters managed by Patroni with consistent, application-aware backups. Cluster topology is automatically detected and rescanned during backup of physical and virtual machines (VMware, Hyper-V, and Nutanix AHV), with log shipping from the primary node for point-in-time recovery. Restore full Patroni instances or individual databases using Veeam Explorer for PostgreSQL.
New Epic EHR System Protection					Protect Epic EHR systems with automated, application-aware backups built for InterSystems IRIS, the database platform behind Epic environments. A dedicated Protection Group and backup policy leverage storage snapshots to process data efficiently at the block level, with the application brought to a consistent state, and can run in snapshot-only mode. A guided restore wizard recovers to the original or an alternate location. Not available in the Essentials license.
MongoDB Backup					MongoDB backup policy enables the protection of MongoDB workloads with application-consistent backups, enabling granular recovery.
Enhanced Unstructured Data Backup					Protect and recover NAS file shares (SMB and NFS) and object storage effectively and at scale, with granular backup and recovery. Back up directly to Veeam repositories, disk, tape, or object storage for short- and long-term objectives, with GFS retention configurable at the job level for policy-based long-term retention of unstructured data. Low-cost archive storage can be used as the primary repository, including AWS S3 Glacier and Azure Archive. Integrated malware detection scans backups at the file level using analytics, signatures, and indicators of compromise. Threat Hunter AV and YARA scans run through SureBackup and on demand. The first 500GB of any data source is free, with additional capacity licensed with VUL at 500GB per license. Long-term file version archival is not available with Community edition.

Backup and Recovery Powered by Veeam Backup & Replication	Veeam Data Platform Veeam Universal License (VUL)				Description
	Community	Foundation	Advanced	Premium	
New Application Backup Repository					A repository type that protects virtually any workload capable of exporting its data, including custom line-of-business applications, databases, DBaaS, containers, and network device configurations. Provides immutable, snapshot-based protection with backup copy to a secondary location, and supports capabilities such as Oracle Incremental Merge with granular, point-in-time recovery. Available on the Veeam Infrastructure Appliance.
Agents for Microsoft Windows, Linux and macOS					Agent-based backup for Windows, Linux and macOS servers, and workstations with automated deployment and management directly within the backup console.
Cloud-Integrated Agents					Create application-aware backups of workloads hosted on Infrastructure as a Service (IaaS) VMs using cloud-optimized Veeam Agents. Optimizations include writing backups directly to object storage, utilization of AWS, Microsoft Azure, and Google Cloud services for workload discovery and inclusion/exclusion, and independent operation without direct network connectivity.
Agents for AIX and Solaris					Agent-based backup for AIX and Solaris servers to Veeam backup repositories.
Backup copy jobs					Copy any backups to your DR storage location of choice automatically, including validation and remediation, to ensure copies are available and reliable.
Enhanced End-to-end encryption					Secure backup data and network transfers with end-to-end AES 256-bit encryption, with no negative impact on built-in compression and WAN acceleration data reduction ratios. All editions include encryption at-source, in-flight, and at-rest. Hybrid post-quantum key establishment protects Veeam data mover transport paths by combining ML-KEM with classical ECDHE (per NIST IR 8547), defending session confidentiality against “harvest now, decrypt later” interception. Community edition does not include lost password protection.
Primary Snapshot Orchestration					Additional storage snapshots, including the option for Oracle and SQL Server transaction log backup, can be created on the primary storage arrays for a wide range of storage systems. Orchestration for secondary storage snapshots is included for several storage vendors.
ROBO Guest Interaction Proxy					Reduce the load on the central backup server, improve scalability, and simplify networking for environments with a large number of remote office/branch offices (ROBOs) when performing application-aware processing and guest file system indexing.

 Fully supported
  Partially supported

Backup and Recovery Powered by Veeam Backup & Replication	Veeam Data Platform Veeam Universal License (VUL)				Description
	Community	Foundation	Advanced	Premium	
Proxy affinity					Avoid cross-node network traffic across multiple all-in-one Veeam appliances by associating backup proxies and backup repositories located on the same appliance together.
Storage latency control					Set the maximum acceptable I/O latency level for production datastores to ensure that backup and replication activities do not impact storage availability to production workloads. Enterprise edition includes a global latency setting.
Built-in WAN Acceleration					Get replicas and backup copy jobs off site up to 50x faster and save bandwidth.
Backup from Storage Snapshots					Create image-based backups and replicas as often as necessary with little to no impact on production from the world's leading storage providers, for backups from primary and secondary storage snapshots. Manage multiple arrays as a single fleet with automatic discovery, registration, and consistent, policy-based snapshot protection across supported arrays.
Cloud Backup & Recovery					
AWS Backup & Recovery					Native protection for Amazon EC2, Amazon RDS, Amazon Aurora, Amazon DynamoDB, Amazon S3, Amazon VPC data, Amazon FSx, and Amazon Redshift. Full instance and granular restore options available in-place or as-new to the same or different account or region. Backup, restore, and migration out of AWS options include to on-premises, Microsoft Azure, and Google Cloud.
Azure Backup & Recovery					Native protection for Azure VMs, Azure SQL, Azure Files, Azure Blob, and Azure Cosmos DB. Full instance and granular restore options available in-place or as-new to the same or different subscription or region. Backup, restore, and migration out of Azure options include to on-premises, AWS, and Google Cloud.
Google Cloud Backup & Recovery					Native protection for Compute Engine VMs, Cloud SQL for MySQL, and PostgreSQL and Cloud Spanner. Full instance and granular restore options available in-place or as-new to the same or different project or region. Backup, restore, and migrate out of Google Cloud options include to on-premises, AWS, and Microsoft Azure.
Cost Control					Optimize and control cloud spend while meeting service-level, retention, and compliance objectives. Cost control measures include backup compression, tiering to archival object storage classes, dynamic compute resourcing, proactive cost forecasting, and capacity planning.

✓ Fully supported ✓ Partially supported

Backup and Recovery <i>Powered by Veeam Backup & Replication</i>	Veeam Data Platform Veeam Universal License (VUL)				Description
	Community	Foundation	Advanced	Premium	
Cloud Security	✓	✓	✓	✓	Secure backup data in line with best practices and well-architected frameworks. Security measures include logical air-gapping of backups, least privilege access through identity and access management, integration with cloud-provided encryption and key management services, and immutability.
Enterprise App Backup Plugins					
Veeam Plug-in for IBM Db2 (Intel Linux + IBM AIX + IBM Power)		✓	✓	✓	Protect IBM Db2 databases running on Intel Linux, IBM AIX, or IBM Power. Supports standalone instances as well as high availability disaster recovery (HADR).
Veeam Plug-in for Oracle RMAN, SAP HANA and SAP on Oracle		✓	✓	✓	Stream Oracle RMAN, SAP HANA, and SAP on Oracle backups into Veeam repositories and recover with ease, leveraging native backup and restore capabilities. Enterprise plug-ins can be deployed to Linux, AIX, Solaris and Microsoft Windows operating systems. Include central management on Windows and Linux.
Veeam Plug-in for Microsoft SQL		✓	✓	✓	Enable native Microsoft SQL Server backups directly to Veeam storage repositories. Integration with Microsoft SQL Server Management Studio simplifies backup and recovery administration tasks.
New Veeam Plug-in for SAP MaxDB		✓	✓	✓	Protect SAP MaxDB databases with native plug-in integration, streaming backups into Veeam repositories for reliable recovery. Plug-in backups can be written to tape for long-term, air-gapped retention.
Storing Backups					
Veeam Data Cloud Vault	✓	✓	✓	✓	Gain instant access to secure, predictably priced cloud object storage with Veeam Data Cloud Vault, completely integrated with Veeam Data Platform.
Object storage	✓	✓	✓	✓	Directly backup to any object storage on-premises or in the public cloud with ransomware protection immutability provided by storage vendors. Community Edition supports recovery from object storage only.
Linux Hardened Repository	✓	✓	✓	✓	Keep your backups safe in hardened, malware- and hacker-proof Linux repositories, with immutable backups preventing encryption and deletion by ransomware and malicious actors.

Backup and Recovery Powered by Veeam Backup & Replication	Veeam Data Platform Veeam Universal License (VUL)				Description
	Community	Foundation	Advanced	Premium	
Veeam Cloud Connect Backup					Get your backups off-site with fully integrated, fast and secure backup, and restore to the cloud with one of our Veeam-powered service providers. This built-in capability makes it easy to establish a connection with a Cloud Repository, target the repository for Backup Jobs, and even backup directly to the cloud.
VMware Cloud Director Backup					Backup vApp and VM metadata and attributes and restore vApps and VMs directly to vCloud with full support for fast provisioned VMs. All editions include integrated visibility of vCloud Director infrastructure, backup via VeeamZIP (including backup of vApp and VM metadata and attributes) and direct restore to vCloud. Community Edition does not include the following: support for scheduled incremental backup jobs of vCloud VMs, customer portal integrations via RESTful API, self-service, tenant-managed backup and restore via enterprise manager, as well as native vCloud Director authentication
Scale-out Backup Repository (SOBR) with object storage support					Provide an abstraction layer across individual storage devices to create a single virtual pool of backup storage for your backups, with Performance, Capacity, and Archive Tiers automating management for the entire backup lifecycle. VUL has no limitations on the number of repositories or extents.
SOBR Capacity Tier					Leverage native object storage integration with AWS, Microsoft Azure, IBM Cloud, Google Cloud Storage, and most S3-compatible object storage offerings for on-premises or cloud-based repositories. Protect your backups against malicious actors with S3 Object Lock based immutability. Other capabilities include the ability to move inactive backup chains to the capacity extent, copy new backup files, move data from capacity extent back to performance extents and restore data from capacity tier without creating a new SOBR.
SOBR Archive Tier					Reduce the costs of long-term data archival and retention by up to 20 times and replace manual tape management with native support for Amazon S3 Glacier (including Glacier Deep Archive) and Microsoft Azure Archive Storage through end-to-end backup life cycle management.
S3-compatible object storage with data archiving enabled					Move GFS restore points. Increase cost savings with tape via Smart Object Storage API for Amazon S3 Glacier compatible systems.
Health check for Capacity Tier					Health Check proactively verifies the existence of objects via API calls. Object storage vendors usually provides 11 nines durability. Health check enabled per default (new installations).

✓ Fully supported ✓ Partially supported

Backup and Recovery Powered by Veeam Backup & Replication	Veeam Data Platform Veeam Universal License (VUL)				Description
	Community	Foundation	Advanced	Premium	
Move and Copy backup files		✓	✓	✓	Move or copy backup files across multiple jobs or repositories to easily achieve the desired RPO, rebalance backup storage or manage migration scenarios.
Enhanced Native tape support	✓	✓	✓	✓	Back up files and Veeam Enterprise Application Plug-in backups to any LTO-compatible tape device, including IBM Jaguar drives for low-cost, air-gapped protection. Backup to Tape jobs provide tighter integration with primary backup jobs, a dedicated media pool type to simplify GFS retention, and global media pools to simplify the use of multiple tape devices. NDMP support for NAS device protection includes NetApp SMTape for efficient block-level backup of NetApp volumes directly to tape. VUL or Capacity Packs are required for File to Tape jobs. Community Edition supports only File to Tape jobs. SMTape is not available in the Essentials license.
IBM Jaguar tape support		✓	✓	✓	Reduce costs without compromising on security by combining Veeam's air gapped data protection with low-cost storage at enterprise scale using IBM Jaguar drives.
File versions archiving		✓	✓	✓	Archive all or only specific file versions for a longer period of time with file share backup jobs.
NetApp ONTAP FlexGroups support	✓	✓	✓	✓	Backup and recover large volumes on NetApp ONTAP FlexGroups ensuring that your data stays protected at scale.
Support for primary snapshot immutability for HPE 3PAR/ Primera/Alletra		✓	✓	✓	Support for creating immutable snapshots on HPE 3PAR/Primera/Alletra arrays by leveraging the native Virtual Lock functionality. A valid Virtual Lock license is required.
HPE StoreOnce Catalyst Copy target immutability support		✓	✓	✓	Persist backup immutability and retention (GFS) using native APIs for HPE StoreOnce Catalyst Copy.
Snapshots for FlashCopies in IBM FlashSystem & SAN volume controller	✓	✓	✓	✓	Support for Volume Groups Snapshots (requires IBM Spectrum Virtualize 8.5.1 or newer).
Immutability for Dell Data Domain with support of DD-native Retention Lock		✓	✓	✓	Persist backup immutability when using Data Domain Retention Lock.
Smart Load balancing support for Isilon and NetApp		✓	✓	✓	Ability to automatically discover the cluster node that should be used during processing whenever source storage is a cluster with multiple nodes.

 Fully supported
  Partially supported

Backup and Recovery Powered by Veeam Backup & Replication	Veeam Data Platform Veeam Universal License (VUL)				Description
	Community	Foundation	Advanced	Premium	
Enhanced De-duplicating storage appliance integration					Get faster backup performance by backing up to deduplicating storage integrations (Dell Data Domain Boost, HPE StoreOnce Catalyst, Quantum DXi and ExaGrid Accelerated Data Mover). Native copy between two Dell Data Domain (DD Boost) repositories uses Data Domain's APIs with no rehydration or gateways, managed as a single Storage copy job or policy and supporting all workload types for both backup and backup copy jobs. HPE StoreOnce Cloud Bank Storage is supported as a backup and backup copy target, extending the StoreOnce deduplication chain into low-cost object storage for long-term retention.
Replication					
Enhanced Universal CDP					Universal CDP delivers continuous data protection for any Windows and Linux machine, physical, virtual, or cloud, replicating directly to VMware vSphere or to VMware Cloud Director via Veeam Cloud Connect.
Veeam CDP (Continuous Data Protection)					Eliminate downtime and minimize data loss for Tier-1 VMware vSphere and Cloud Director workloads with built-in CDP and achieve immediate recoveries to a latest state or desired point in time providing the best recovery point objectives (RPOs).
SureReplica for CDP					Ensure disaster recovery really works. Replication continues during failover tests. Failover, antivirus, YARA scan, and CRC check. Comprehensive reporting in Veeam Recovery Orchestrator.
File and application-level restore from CDP replica					Recover files from CDP replica from any restore point. File-level recovery is possible from all restore points available. Replication continues in the background while restore happens.
Planned failover with CDP replicas					Verified and orchestrated recovery for when you need to failover without disrupting workloads.
Image-based VM replication					Replicate VMs periodically on site for high availability or off site for DR.
Assisted failover and failback					Replica rollback and assisted failover and failback.
Replication from a backup					Create replicas directly from backup files without impacting production.

✓ Fully supported ✓ Partially supported

Backup and Recovery Powered by Veeam Backup & Replication	Veeam Data Platform Veeam Universal License (VUL)				Description
	Community	Foundation	Advanced	Premium	
Veeam Cloud Connect Replication		✓	✓	✓	Ensure availability of your mission-critical applications with fully integrated, fast, and secure cloud-based DR through a Veeam-powered Disaster Recovery as a Service (DRaaS) provider. In the event of disaster or other use case, replicas stored in the repository can be used for partial- or full-site failover.
One-click failover orchestration		✓	✓	✓	Built-in failover plan orchestration enabling easy, one-click site failover to minimize unplanned downtime.
VMware Cloud Director Replication		✓	✓	✓	Dedicated replication job type enables service providers to perform vApp replication within and across vCloud Director instances. The replication job processes vApp VMs and metadata (such as networking or VM start order) to create a ready-to-use replica vApp in the target vCloud Director that can be leveraged instantly in case of a disaster.
Restore					
Entire VM restore	✓	✓	✓	✓	Restore selected VMs to the original or a new location.
VM disks and files restore	✓	✓	✓	✓	Restore individual virtual disks and other VM files (such as VMX) from both backups and storage snapshots.
Direct Restore to AWS, Azure, and Google Cloud	✓	✓	✓	✓	Restore or migrate on-premises, Windows-based or Linux-based VMs, physical servers and endpoints directly to AWS, Microsoft Azure, and Google Cloud.
Enhanced Bare Metal Recovery	✓	✓	✓	✓	Restore an entire Windows machine to the same or dissimilar hardware from bootable Veeam Recovery Media, including full system, volume-level, and disk-level recovery after hardware failure, corruption, or a cyberattack. Recovery can also be initiated and managed remotely through a Web UI once the recovery ISO is booted, restoring failed or compromised systems without physical access to the hardware, with an optional dedicated recovery partition for on-demand recovery. Currently supported for Windows only. Remote Bare Metal Recovery is not available in the Community, Foundation or Essentials license.
New Active Directory Forest Recovery			✓	✓	Recover an entire Active Directory forest to a point in time after a cyberattack or catastrophic failure. A guided wizard restores the Active Directory forest and automates the post-restore activities required to bring the forest back online, replacing a manual process of more than 40 steps.

✓ Fully supported ✓ Partially supported

Backup and Recovery <i>Powered by Veeam Backup & Replication</i>	Veeam Data Platform Veeam Universal License (VUL)				Description
	Community	Foundation	Advanced	Premium	
Instant Recovery					
New Instant Recovery to Microsoft Azure	✓	✓	✓	✓	Instant Recovery to Azure restores VMware and Hyper-V VMs, Windows/Linux machines, Nutanix AHV VMs, and Amazon EC2 instances from Veeam Data Cloud Vault as Azure VMs in moments for rapid disaster recovery.
Instant VM Recovery	✓	✓	✓	✓	Accelerate DR and lower RTOs with Veeam’s patented Instant Recovery engine. Restore ANY backup instantly to a VMware, Microsoft Hyper-V, or Nutanix AHV VM by running it directly from backup.
Instant disk recovery	✓	✓	✓	✓	Reduce your Instant Recovery footprint by instantly restoring only the required disks of large vSphere VMs, as opposed to restoring the entire VM (e.g., only OS disk, or only data disks).
Instant database recovery		✓	✓	✓	Instantly recover any Microsoft SQL Server and Oracle database from backup to the latest state or to an earlier point-in-time to any production database server or cluster (physical or virtual) in minutes regardless of its size.
Instant file share recovery	✓	✓	✓	✓	Instantly restore SMB file shares directly from backups to allow users to continue day-to-day operations quickly, and easily migrate all changes made to the SMB share to production. For NFS file shares, leverage the publishing functionality to provide read-only access to the data stored in the backup.
Instant disk publish	✓	✓	✓	✓	Empower application owners to quickly locate the data they need for operations and recovery, combining high-performance search with a disk published directly from backup.
File & Item-level Recovery					
File-level Recovery	✓	✓	✓	✓	Directly recover files from Windows, Linux, BSD, macOS, Novell, Solaris and AIX.
Compare with production	✓	✓	✓	✓	Easily compare files from backups with the production file system to view and recover only changed files. Available for image-level backups only. Community Edition and Standard can compare and view only. VUL, Enterprise and Enterprise PLUS can compare, view, and restore to production.
Permissions recovery		✓	✓	✓	Restore lost or modified permissions to an existing file. Available for image-level Windows backups.

Backup and Recovery Powered by Veeam Backup & Replication	Veeam Data Platform Veeam Universal License (VUL)				Description
	Community	Foundation	Advanced	Premium	
Veeam Explorer for MongoDB					Streamlined granular recovery of MongoDB collections, databases and instances without requiring a substantial MongoDB skillset.
Veeam Explorer for SAP HANA					Restore a single database or several databases from SAP HANA plug-in backups with ease to the original or to a different location to any point in time and customize restore options.
Veeam Explorer for PostgreSQL: Export DB					Export specific PostgreSQL databases in the native dump format directly from backup or from the published PostgreSQL instance.
Veeam Explorer for Storage Snapshots					Restore individual VMs, guest files and application items from storage snapshots.
Veeam Explorer for PostgreSQL					Restore and publish PostgreSQL instances to the original or to a new server with ease, without extensive PostgreSQL administration background.
Veeam Explorer for Microsoft Active Directory					Search and restore for all Active Directory (AD) object types, such as users, groups, computer accounts and contacts, including user and computer password recovery. All editions support single user and computer account restore (including the ability to restore passwords) as well as export into LDIFDE format. Community Edition does not allow multi-select restore and container restore, Group Policy Objects (GPO) restore, AD-integrated DNS records restore, and Configuration Partition objects restore.
Veeam Explorer for Microsoft Exchange					Get instant visibility into Microsoft Exchange backups for item recovery of individual Exchange items (emails, appointments, notes, contacts, etc.), online archive mailboxes and hard-deleted items. Leverage comprehensive e-Discovery functionality, including query result size estimation and detailed export reports. Community Edition does not support restoring back to the original mailbox.
Veeam Explorer for Microsoft SQL Server					Restore individual SQL databases with ease, without needing an extensive SQL background or having to search for database and transaction-log files. All editions support local, point-in-time SQL database file restores. However Community Edition does not include agentless, transaction log backup and replay, transaction-level recovery of databases and SQL objects (tables, stored procedures, views, etc.) back to the original or new SQL Server.
Veeam Explorer for Microsoft SharePoint					Get instant visibility into SharePoint backups with advanced search-and-browse capabilities for quick recovery of individual SharePoint items and entire sites. All editions support SharePoint item restore via save, send, and export. However, Community Edition does not support entire-site restore, as well as restore to the original location.

 Fully supported

Backup and Recovery Powered by Veeam Backup & Replication	Veeam Data Platform Veeam Universal License (VUL)				Description
	Community	Foundation	Advanced	Premium	
Veeam Explorer for PostgreSQL: Instant Recovery					Provide instant availability to PostgreSQL directly from your backup, without compromise with background data recovery and journaling.
Guest file system indexing					A catalog of guest files enabling effortless search of individual files to find and restore a file without knowing its precise location, or the time when it was deleted. All editions provide a catalog of guest files in backups currently on disk. Community Edition does not provide a catalog of archived backup files or integrate with one-click to enable restores directly from search results.
Veeam Explorer for Oracle					Restore individual Oracle databases with ease without needing an extensive Oracle background or having to search for database and transaction-log files. Includes agentless, transaction-log backup, archived log management, and transaction-level recovery of databases back to the original or new Oracle Server, as well as the ability to publish and export Oracle databases.
DataLabs					
Secure Restore					Increase security and reduce interruptions caused by viruses and recover back to a safe, uncompromised restore point through an optional antivirus scan directly in backup files prior to recovery; agnostic support for Windows Defender, ESET, Kaspersky, and Symantec Protection Engine, as well as the ability to extend to other third-party antivirus tools. YARA scan not available in Community and Foundation.
SureBackup					Automatically test and verify recoverability of every VMware and Hyper-V backup by running the VM directly from a backup file in a fenced-off copy of your production environment, including support for custom application test scripts. YARA scans are not available in Community Edition and Foundation.
SureReplica					Automatically test and verify recoverability of every VMware and Hyper-V replica by performing a failover to a fenced-off copy of your production environment, including support for custom application test scripts.
Staged Restore					Clean up sensitive data from the selected restore point in a fenced-off copy of your production environment before restoring the modified VM state to production.
On-Demand Sandbox					Run one or more VMs directly from a backup a fenced-off copy of your production environment to troubleshoot issues, test upgrades, train staff on a working copy of the production environment, without impacting business operations.

Backup and Recovery Powered by Veeam Backup & Replication	Veeam Data Platform Veeam Universal License (VUL)				Description
	Community	Foundation	Advanced	Premium	
On-Demand Sandbox from Storage Snapshots					Use storage snapshots to quickly create fenced-off copies of your VMware production environment operating at full I/O performance.
Data Integration API					Mount your backups instantly everywhere. Put your backups to work and reuse your data by enabling third-party applications and scripts to instantly access the content of any Veeam backup for data mining, security analysis, compliance checks, and other data reuse scenarios.
Self-service					
Role-Based Access Control (RBAC)					Role-Based Access Control (RBAC) provides granular, security-focused delegation of administrative tasks and access rights. RBAC allows organizations to define and manage who can access specific features, data, or resources within the Veeam environment, significantly enhancing security, compliance, and operational efficiency.
One-click file and VM recovery portal for help desk operators					Restore files, VMs, or the entire vApp with a single click through a web UI.
Microsoft Exchange item recovery portal for help desk operators					Restore missing mailbox items back to the original mailbox with a single click through a web UI.
Microsoft SQL Server database recovery portal for Microsoft SQL Server databases					Restore individual databases back to the original server or a new SQL server with a single click through a web UI.
Oracle database recovery portal for Oracle databases					Restore Oracle databases to the original server, a new Oracle server or PostgreSQL with a single click through a web UI.
Self-service file restore portal					File-restore portal with automatic VM detection and automatic delegation based on the Local Administrator group membership.
Recovery delegation					Enable full self-service for all web UI recovery features by delegating recoveries for individual VMs and groups of VMs to specific users or groups such as local IT staff, application owners, department members, etc.

Backup and Recovery Powered by Veeam Backup & Replication	Veeam Data Platform Veeam Universal License (VUL)				Description
	Community	Foundation	Advanced	Premium	
Native VMware Cloud Director plug-in					This capability allows service providers to extend the vCloud Director tenant UI to include Veeam Backup & Replication functionality, enabling tenants to manage their own backups and restores without leaving the convenience of the vCloud Director web console. This integration is based on Veeam's existing vCloud Director Self-Service Backup & Restore Portal.
Deployment					
Windows Installer					Installable software packages that are fully compatible with supported versions of Microsoft Windows enables straightforward deployment through familiar Windows installation processes. Can be installed either using a graphical user interface or by command-line for unattended (silent) installations. The software is available for all editions of Veeam Data Platform, allowing users to operate with essential backup and recovery features for even the smallest environments.
New Veeam Software Appliance (ISO)					Pre-packaged, bootable installation image (ISO file) that includes a lightweight, secure-by-default Linux-based operating system (JeOS) and the Veeam Backup & Replication software to streamline the deployment process by bundling the required Operating System and Veeam components into a single installation. This reduces setup complexity and provides a consistent deployment experience. Essentials license holders can only deploy on any hypervisor supported by Veeam and on "Veeam Ready - Appliance" certified hardware.
New Veeam Software Appliance Virtual Machine Templates					Pre-configured, ready-to-deploy virtual machine image that bundles a lightweight, secure-by-default Linux-based operating system (JeOS) and the Veeam Backup & Replication software to streamline the deployment process by bundling the required Operating System and Veeam components into a single installation. This reduces setup complexity and provides a consistent deployment experience.
New JeOS image for infrastructure components					The Veeam JeOS (Just Enough Operating System) image is a minimal, purpose-built Linux-based operating system bundled with Veeam software, designed to streamline the deployment and management of backup infrastructure components. This image is intended for roles such as backup proxies, repositories (including the Veeam Hardened Repository), mount servers, and gateways within the Veeam Backup & Replication architecture.

Backup and Recovery <i>Powered by Veeam Backup & Replication</i>	Veeam Data Platform Veeam Universal License (VUL)				Description
	Community	Foundation	Advanced	Premium	
Management					
Enhanced Web UI		✔	✔	✔	Manage Veeam Backup & Replication through a modern web interface with an intuitive, familiar layout, advanced filtering, and powerful search to streamline day-to-day operations. Embedded Veeam ONE views, including the alarms overview and Threat Center, surface monitoring alerts and security insight directly within the console, bringing data protection health and threat visibility into the same view as backup management without switching tools.
New High Availability				✔	Achieve continuous availability with built-in redundancy and failover, ensuring critical workloads stay resilient and operational at all times. Available only on the Veeam Software Appliance.
Veeam Backup Enterprise Manager: Centralized Management Web UI		✔	✔	✔	Access a web-based, consolidated view of your distributed deployment in a single pane of glass including centralized monitoring, reporting, consolidated alerting across multiple backup servers, and the ability to start and stop jobs. Additionally, full job management functionality and the ability to perform restores, including Instant Restore for VMware, Hyper-V, NAS backups as well as Migrate to Production.
PowerShell module	✔	✔	✔	✔	Use PowerShell Cmdlets to create custom workflows and automate Veeam tasks.
RESTful API	✔	✔	✔	✔	Integrate into existing systems and execute and automate Veeam tasks using the RESTful API framework. Service Providers using rental licenses have API access across all editions.
Enhanced Built-in management for Veeam Agents	✔	✔	✔	✔	The ability to organize, automate, and deploy Windows, Linux, Mac, AIX and Solaris agents with protection groups based on Active Directory containers, CSV files, or public cloud tags, with custom automatic update and deployment schedules. Veeam Agent for Windows can be branded with a custom logo and color scheme, with control over which actions end users can perform. Community Edition is limited to 10 instances.
Built-in management for Veeam Plug-ins		✔	✔	✔	Simplify operations with centralized management capabilities to organize, automate, and deploy Oracle RMAN, SAP HANA and SAP on Oracle database plug-ins including creation of application backup policies.
New JeOS External monitoring integrations (Node Exporter, Syslog)		✔	✔	✔	Integrate with modern observability platforms to monitor JeOS (Just Enough Operating Systems) across backup infrastructure.

Monitoring and Analytics <i>Powered by Veeam ONE</i>	Veeam Data Platform			Description
	Community	Advanced	Premium	
Monitoring and Reporting				
Enhanced Veeam Threat Center dashboard	✓	✓	✓	Highlight threats, identify risks, and measure the security score of your environment from one dashboard. Centralized analytics for the entire platform.
New High Availability Health Monitoring			✓	Veeam ONE provides real-time High Availability health monitoring with remediation options and alerts to ensure continuous protection for critical workloads.
New Integration with Recon		✓	✓	Veeam ONE surfaces Recon Scanner intel in Threat Center to deliver proactive threat visibility and integrated adversary intelligence, strengthening the security posture across Veeam Data Platform.
New Single Sign-On (SSO)		✓	✓	Authenticate Veeam ONE users through your organization's SAML or OIDC identity provider, removing the need for separate credentials. SSO-authenticated users and groups are automatically mapped to Veeam ONE roles, and the experience applies consistently across both the Web Client and Desktop Client.
New Role-Based Access Control (RBAC)		✓	✓	Enforce least-privilege access with a role framework that maps local or identity-provider users and groups to defined roles, scoped to specific backup servers. The assigned scope governs what each user sees across dashboards, reports, alarms, Threat Center, and the Jobs Calendar, making it well suited to service providers and distributed enterprises.
New Multi-factor Authentication (MFA)		✓	✓	Add a second layer of verification for local Veeam ONE accounts across both the Web Client and Desktop Client, with group-based enablement to simplify enforcement. Users authenticated through an external identity provider continue to follow their provider's existing MFA flow.
Enhanced Flexible and Customizable Report Generation		✓	✓	Generate lightning-fast, customizable reports at scale with PostgreSQL-powered performance, HTML5 interactivity, and executive-ready exports.
Protected Databases Reporting		✓	✓	Track database backup health, alerts, and compliance with real-time visibility across dashboards, inventory, and reports. Integrated for scalable monitoring.
ServiceNow integration	✓	✓	✓	Bi-directional Incident lifecycle with ServiceNow. Backup anomalies are instantly reported into ServiceNow so you can immediately perform triage and reduce further risk to your data.
Platform Reporting	✓	✓	✓	Complete monitoring, reporting, and alarming for new functionality, including: Backup of Object Storage, Malware Detection Engine and Security & Compliance Analyzer.
Performance monitoring and alerting for backup activity	✓	✓	✓	Performance monitoring and alerting for backup activity displays Veeam Backup & Replication jobs, including their latest state and performance statistics. Veeam ONE has no limitations on the number of Veeam Backup & Replication servers that can be monitored. Note that Veeam ONE <i>Community Edition</i> is limited to one server.

Monitoring and Analytics <i>Powered by Veeam ONE</i>	Veeam Data Platform			Description
	Community	Advanced	Premium	
Email notification and reports				You can receive alarm notifications through a customizable email. Email customizations are not available in Veeam ONE <i>Community Edition</i> , and emails will not include all alarm details, such as time and affected object.
Veeam Backup for Hypervisor Plugins				Monitor and report on Veeam Backup across hypervisor plug-ins, including Nutanix AHV, Proxmox VE, oVirt KVM, XCP-ng, Sangfor HCI, Scale Computing HyperCore, and HPE VM Essentials, with alarms and reports that help you analyze trends, track how policies and backup jobs evolve, and determine the backup status of workloads across these environments.
Veeam Agent monitoring and reporting				Support for Veeam backup agents includes several alarms and reports that help you analyze trends and determine how policies and backup jobs have evolved, as well as determine the backup status of agents, including which agents have no backup copies and how many are protected or unprotected. This is given with the backup state along with the total number of successes, warnings, and failures.
Veeam Cloud Connect reporting				Reports include information about the Veeam Cloud Connect infrastructure, like user quota usage, capacity planning for cloud repositories and configuration data for cloud gateways and repositories.
Performance monitoring and alerting for Veeam Cloud Connect				Performance monitoring and alerting for Veeam Cloud Connect displays jobs for Veeam Cloud Connect backup servers only, including their latest state and performance statistics. Note: To monitor and report on managed clients, Veeam ONE needs to be deployed at the tenant's site. Veeam ONE <i>Community Edition</i> is limited to one week of performance.
Heatmaps				Heatmaps help plan resource usage and easily optimize backup activities with real-time visibility into backup repositories and proxies. Veeam ONE <i>Community Edition</i> is limited to three proxy servers and three repositories.
Monitoring and Alerting for Hybrid Cloud				
Veeam Backup for AWS, Veeam Backup for Microsoft Azure, and Veeam Backup for Google Cloud — native data protection support				Monitoring and alerting: Veeam ONE users can now monitor the backup and snapshot job statuses of cloud-based workloads through predefined alarms and notifications. Backup status reporting: A predefined protected VMs report now includes VMs that are hosted in AWS, Microsoft Azure, and Google Cloud Platform public clouds. This helps users in verifying the data protection status of each discovered VM, based on the agreed service level agreement (SLA).

Monitoring and Analytics <i>Powered by Veeam ONE</i>	Veeam Data Platform			Description
	Community	Advanced	Premium	
Reporting				Get detailed visibility of protected and unprotected services from your Public Cloud. Supports AWS (EC2, RDS, EFS, VPC, FSx, Redshift Clusters, Redshift Serverless, DynamoDB), Microsoft Azure (Virtual Machines, SQL Database, Azure Files, Azure Virtual Network, CosmosDB), and Google Cloud Platform (Compute Engine, Cloud SQL, Cloud Spanner).
Alarms for Real-time Data Protection Visibility				For Veeam ONE Client protected cloud workloads Virtual Machines, Databases, VPC, and File Shares. Additionally, to the last backup status and date, the last Backup Copy and Last Archive have been introduced for full data retention visibility.
Enhanced Alarms Overview				Alarms Overview category for real-time monitoring across 300+ predefined alarms, with events purpose-built for Data Resilience, Data Security, and Infrastructure Monitoring. Now integrated natively into the Veeam Backup & Replication Web UI and Console.

Monitoring and Alerting for Virtual Infrastructure

Performance monitoring and alerting for virtual infrastructures				Display virtual infrastructure hosts, datastores, and statistics. In Veeam ONE <i>Community Edition</i> , performance graphs only show one week of performance and emails include limited alarm details.
Application-level monitoring and management				Ensure the availability of mission-critical applications, monitor select groups of applications, and create additional alarms to monitor VM service states. Make sure processes aren't exceeding available resources, identify if critical applications, like antivirus software, have been disabled, or indicate if unwanted changes have taken place. With Veeam ONE <i>Community Edition</i> , you can monitor an unlimited number of applications on up to three VMs.
VMware vSphere and Microsoft Hyper-V reporting				Individual report packs for vSphere and Hyper-V provide general configuration overviews for vCenter servers, datastores, clusters hosts and VMs, as well as SCVMMs, volumes, clusters, hosts, and VMs, including information on the most common alarms raised for virtual infrastructure objects. Optimization report packs also allow users to evaluate the efficiency of resource usage and to optimize VM resource provisioning to help achieve improved output and increased ROI for virtualized environments. With Veeam ONE <i>Community Edition</i> , optimization reports are limited to show only three VMs and historical performance reports are limited to the last 24 hours of data.
Multi-tenant reporting and monitoring				Delegate reporting to system administrators over a limited scope of assigned VMs (VMware vSphere only).
Infrastructure assessment: Veeam Backup & Replication				Assessment reporting is designed to verify that your Veeam Backup & Replication installation meets all known best practices.

 Fully supported
  Partially supported

Monitoring and Analytics <i>Powered by Veeam ONE</i>	Veeam Data Platform			Description
	Community	Advanced	Premium	
Virtual infrastructure assessment				Assessment reporting is designed to verify that your VMware vSphere and/or Microsoft Hyper-V infrastructure meets all known best practices.
VMware Cloud Director monitoring and alerting				Companies want to stay ahead of the issues impacting their virtual datacenters and ultimately their customers. To help, Veeam provides capabilities for monitoring teams of service providers to track the availability and configuration of their virtual data centers, including organizations and vApps.
VMware Cloud Director reporting				Businesses want to ensure that they are using the ideal configuration and optimizing their resources to get the most out of their virtual infrastructure when building and maintaining virtual data centers to provide a reliable service to their customers.
Report and Alarm Customization and Automation				
Raw data analysis				Create custom Microsoft Excel reports using templates you define.
Customizable, predefined report templates				Customize and save predefined report templates to create reports that fit your specific information and formatting needs. Veeam ONE <i>Community Edition</i> is limited to saving one customized report template.
Alarm customization and modelling				Ensure complete monitoring coverage by creating custom alarms for events unique to your virtual environment. Model alarms against past performance data to understand potential alarm frequency and avoid inadvertent alert storms and missed events.
Governance and Compliance				
Business view				Categorize and group clusters, hosts, VMs, and datastores by criteria such as business unit, department, purpose and SLA. Leverage VMware Tags to assist with role-based access control and eliminate human error, including tagging sensitive data by location to meet compliance. Easily monitor apps, regardless of geographic location and categorize business view objects based on multiple parameters to gather insight on how infrastructure investments are being leveraged. You also can assign administrators to manage specific parameters.
Intelligent Automation				
Veeam Intelligent Diagnostics				Proactive identification and alerting of known issues within your Veeam environment, providing self-support resolutions via hotfixes or reconfigurations. For Veeam ONE <i>Community Edition</i> , all of the alarms will continue to work but the details for each alarm will not be shown.

Monitoring and Analytics <i>Powered by Veeam ONE</i>	Veeam Data Platform			Description
	Community	Advanced	Premium	
Remediation actions	✓	✓	✓	Predefined and automated resolution of common backup and virtual infrastructure-related issues with self-healing remediation actions help to reduce IT management costs. With Veeam ONE <i>Community Edition</i> , remediation actions are available, but require manual approval.
Dashboards				
Predefined performance dashboards for backup and virtual infrastructures and Veeam Backup for Microsoft 365	✓	✓	✓	Get at-a-glance views of backup jobs and the backup infrastructure, as well as view the VMs, hosts, and clusters that are the highest consumers of CPU, memory, network, and datastore resources. Also, view datastore utilization metrics, including metrics relating to VM snapshots and guest disk space usage.
Customized reporting dashboards	✓	✓	✓	Create your own at-a-glance views of your virtual environment. Veeam ONE <i>Community Edition</i> allows for one customized reporting dashboard to be created.
Capacity Planning				
Capacity planning: VMware vSphere and Microsoft Hyper-V		✓	✓	Individual report packs for VMware vSphere and Microsoft Hyper-V are designed to forecast when the available virtual infrastructure resources will reach their minimum levels. The packs provide recommendations on resource allocation and load balancing to optimize performance and resource utilization in your respective virtual environment and to avoid possible performance bottlenecks.
Deployment project reports		✓	✓	Leverage fully automated “what-if” modeling scenarios to safely add or remove VMs or hosts from your infrastructure and to accurately calculate the required resources needed for each project.
Chargeback and Billing				
Chargeback analysis reports		✓	✓	Chargeback reports help you understand the costs associated with individual virtual infrastructure users, as well as help you perform chargeback by analyzing VM configuration and resource usage, including CPU, memory, and storage. Four reports are included: Host Configuration Chargeback, Host Resource Usage Chargeback, VM Configuration Chargeback, and VM Performance Chargeback.
Veeam backup: Billing	✓	✓	✓	This report provides chargeback capabilities for Veeam Backup & Replication and helps assess storage management costs for backup and replication operations, providing data that can be used in financial and billing reports.

Recovery Orchestration <i>Powered by Veeam Recovery Orchestrator</i>	Veeam Data Platform Premium	Description
Recovery Orchestration & Automation		
Enhanced Orchestration for Microsoft Hyper-V and Azure Local (Azure Stack HCI)	✓	Recover from Hyper-V backups to Hyper-V environments. Migrate from VMware to Hyper-V and build out a recovery plan for Hyper-V backups. Take your existing VMware plan, point it to your new Hyper-V environment and run the plan, including recovery to a standalone Hyper-V host for remote and branch office environments that run single hosts rather than clusters. Orchestration for Hyper-v and Azure Local (Azure Stack HCI) delivers end-to-end cross-platform orchestrated recovery and planned migration with zero data loss configuration.
Orchestration for VMware vSphere	✓	Recover backups from VMware to secondary VMware locations, or migrate VMware VMs to another platform including Hyper-V, Azure Local, Or Microsoft Azure VMs. Orchestration for VMware delivers end-to-end cross-platform orchestrated recovery and planned migration with zero data loss configuration.
Orchestration for Veeam Agents (Windows/Linux)	✓	Recover Veeam Agent Backups of Windows and Linux to VMware or Microsoft Azure environments.
Orchestration of Storage Snapshots	✓	Orchestrate workflows for machines running in vSphere but hosted on Storage Arrays including HPE Alletra MP B10000, NetApp, Lenovo. Failover vSphere VMs and their datastores backed by HPE Alletra MP.
Multi Factor Authentication (MFA)	✓	Multi-factor authentication secures recovery plan execution and approval by requiring multiple identity factors, ensuring compliance and preventing unauthorized actions.
Offline malware scanning for Recovery Plans	✓	On-demand and scheduled malware detection, including malware flag check, antivirus scan, and YARA scan.
Veeam Software Appliance support	✓	Orchestration for the new Veeam Software Appliance deployment models, including support for Veeam Software Appliance High-Availability Cluster.
YARA Rule Management	✓	YARA rule files can be imported to VRO allowing for increased security, manageability, and visibility. Control rule assignments to different groups using VRO scopes and preview YARA rule contents in VRO UI, allowing for version control and other checks. With automated distribution, YARA files are securely delivered to Veeam Backup servers, used for scanning, and then removed.

✓ Fully supported ✓ Partially supported

Recovery Orchestration <i>Powered by Veeam Recovery Orchestrator</i>	Veeam Data Platform	Description
	Premium	
Support for additional repositories	✓	Recovery from Veeam Data Cloud Vault and S3 repositories — AWS, Wasabi, on-premises S3.
Automated Clean Recovery	✓	Restore points that have been marked as Clean during backup accelerate orchestrated recovery of an entire environment using malware-free restore points.
Testing for CDP replica plans	✓	CDP replica testing with zero-impact on production or replication. Fully-featured tests, heartbeat checks, network tests, and custom scripts with all VRO reporting features enabled.
In-guest scripts for Azure	✓	Reduce downtime and eliminate manual tasks when recovering an on-prem workload into Microsoft Azure by orchestrating post-recovery OS configuration and validation. Inject custom scripts into Azure VMs recovered from agent or vSphere backups with all script output captured in VRO reports.
One-Click Mass Recovery	✓	Enable application owners to securely recover single apps or an entire site with a single click. Execute DR plans to achieve automated recovery at scale.
Recovery to Cloud	✓	Orchestrated Direct Restore to Azure gives your business additional resiliency with disaster recovery to the cloud. Orchestrate recovery of VMware and Veeam Agent backups as a VM in Azure, featuring automated mapping of VM resources and cloud networking.
Clean Recovery	✓	During recovery, iterate automated virus scans through multiple restore points until the most recent clean one is found. Regularly scan restore points during DataLab testing, with the results shown in dashboards and reports for improved visibility.
DataLab Management	✓	DataLab tests simulate disaster recovery outcomes, with fully automated DR testing in an isolated network without impacting production systems, including detailed reporting. Create and schedule DataLabs to allow application teams to safely and securely test upgrades, patches, and more.
RBAC and Scopes	✓	Granular role-based access control combined with customizable scopes allows administrators full control over access to recovery resources, allowing secure delegation of DR planning and testing to specialist teams and offloading backup administrators.

✓ Fully supported ✓ Partially supported

Recovery Orchestration <i>Powered by Veeam Recovery Orchestrator</i>	Veeam Data Platform Premium	Description
Dashboards & Reporting		
Dynamic documentation	✓	Autogenerated reports for DR plan definitions, checks, tests and executions remove the burden of documentation production from front-line staff. Documentation is produced in two formats, with full details for deep-dive analysis and an executive summary.
Compliance monitoring for RTOs and RPOs	✓	Meet business needs with RTO and RPO monitoring and reporting. Display achieved RTO & RPO against desired targets for each DR Plan providing an at-a-glance view of SLA compliance.
Scheduled readiness checks	✓	Pre-recovery, detailed readiness check documents ensure you are prepared for any disaster, by checking available restore points, critical infrastructure and required credentials.
DR plan auditing	✓	Audit reporting for Recovery Plans including monthly audit of all recovery plan activity, with change tracking.
